I want to disable the resizable property of a `textarea` .

Currently, I can resize a `textarea` by clicking on the bottom right corner of the `textarea` and dragging the mouse. How can I disable this?

- 4 @JDisaaks - further, allowing resize in certain situations can break layout and printabilit (an important aspect of a current mission-critical project). – [cale\\_b](#) Nov 23 '12 at 19:35
- 8 Sometimes you really do want a non-resizeable textarea. For instance, in this case, when you're (conditionally) converting a textarea into something that just looks like a label. It looks really odd to have a label with a random floating grabber way off to the side. – [neminem](#) Jan 21 '15 at 17:20

The following CSS rule disables resizing behavior for [textarea](#) elements:

By using our site, you acknowledge that you have read and understand our [Cookie Policy](#), [Privacy Policy](#), and our [Terms of Service](#).

To disable it for some (but not all) `textarea` s, there are a [couple of options](#).

To disable a specific `textarea` with the `name` attribute set to `foo` (i.e., `<textarea name="foo"></textarea>`):

```
textarea[name=foo] {
  resize: none;
}
```

Or, using an `id` attribute (i.e., `<textarea id="foo"></textarea>`):

```
#foo {
  resize: none;
}
```

The [W3C page](#) lists possible values for resizing restrictions: none, both, horizontal, vertical, and inherit:

```
textarea {
  resize: vertical; /* user can resize vertically, but width is fixed */
}
```

Review a decent [compatibility page](#) to see what browsers currently support this feature. As Jon Hulka has commented, the dimensions can be [further restrained](#) in CSS using `max-width`, `max-height`, `min-width`, and `min-height`.

### Super important to know:

This property does nothing unless the `overflow` property is something other than `visible`, which is the default for most elements. So generally to use this, you'll have to set something like `overflow: scroll`;

Is there a solution for Firefox, Opera and/or IE? – Šime Vidas Mar 8 '11 at 16:31

By using our site, you acknowledge that you have read and understand our [Cookie Policy](#), [Privacy Policy](#), and our [Terms of Service](#).

- 22 as per [davidwalsh.name/textarea-resize](#) - use `resize:vertical` or `resize:horizontal` to constrain resizing to one dimension. Or use any of `max-width`, `max-height`, `min-width` and `min-height`. – [Jon Hulka](#) Nov 17 '12 at 20:23
- 3 Am I the only one who finds it weird to set this using css and not attributes? Why can't I then set disabled or checked or other properties using CSS ... – [Buksy](#) Aug 8 '16 at 13:15
- 6 @Buksy Because "disabled" is a state, not a visual property. Thus it's logical that it shouldn't be decided by a *styling* language. – [Kroltan](#) Sep 8 '16 at 13:01 

▲ In CSS ...

CSS3 has a new property for UI elements that will allow you to do this. The property is the [resize property](#). So you would add the following to your stylesheet to disable resizing of all textarea elements:

```
textarea { resize: none; }
```

This is a CSS3 property; use a [compatibility chart](#) to see browser compatibility.

Personally, I would find it very annoying to have resizing disabled on textarea elements. This is one of those situations where the designer is trying to "break" the user's client. If your design can't accommodate a larger textarea, you might want to reconsider how your design works. Any user can add `textarea { resize: both !important; }` to their user stylesheet to override your preference.

By using our site, you acknowledge that you have read and understand our [Cookie Policy](#), [Privacy Policy](#), and our [Terms of Service](#).

But that would be the user *intentionally breaking* their layout, rather than a user who just needs to resize his/her `textarea` and ends up making something not work – [Redwolf Programs](#) Apr 15 at 12:35

22

```
<textarea style="resize:none" rows="10" placeholder="Enter Text" ></textarea>
```

If you need deep support you can use old school technique

```
textarea {  
  max-width:/*desired fixed width*/ px;  
  min-width:/*desired fixed width*/ px;  
  min-height:/*desired fixed height*/ px;  
  max-height:/*desired fixed height*/ px;  
}
```

3 This working in most browsers. in every latest browser. – [Thusitha Wickramasinghe](#) Nov 9 '15 at 11:04

---

it won't prevent textarea from resizing – [Mishko Vladimir](#) Dec 27 '16 at 18:14

---

▲ You simply use: `resize: none;` in your CSS.

6

The **resize** property specifies whether or not an element is resizable by the user.

▼ **Note:** The `resize` property applies to elements whose computed overflow value is something other than "visible".

Also **resize** not supported in IE at the moment.

Here are different properties for `resize`:

#### No Resize:

```
textarea {  
  resize: none;  
}
```

#### Resize both ways (vertically & horizontally):

```
textarea {  
  resize: both;  
}
```

By using our site, you acknowledge that you have read and understand our [Cookie Policy](#), [Privacy Policy](#), and our [Terms of Service](#).

```
textarea {  
  resize: vertical;  
}
```

### Resize horizontally:

```
textarea {  
  resize: horizontal;  
}
```

Also if you have `width` and `height` in your CSS or HTML, it will prevent your textarea be resized, with a broader browsers support.

▲ To disable the resize property, use the following CSS property:

5

`resize: none;`

- ▼
- You can either apply this as an inline style property like so:

```
<textarea style="resize: none;"></textarea>
```

- or in between `<style>...</style>` element tags like so:

```
textarea {  
  resize: none;  
}
```

- ▲ CSS3 can solve this problem. Unfortunately it's only supported on [60% of used browsers](#) nowadays.
- 3 For IE and iOS you can't turn off resizing but you can limit the `textarea` dimension by setting its `width` and `height` .
- ▼

```
/* One can also turn on/off specific axis. Defaults to both on. */  
textarea { resize:vertical; } /* none/horizontal/vertical/both */
```

With `@style` , you can give it a custom size and disable the resize feature (`resize: none;`) .

1

```
@Html.TextAreaFor(model => model.YourProperty, new { @style = "width: 90%; height: 180px; resize: none;" })
```

3 Don't abuse `!important` attribute. Meaningless to fix the width & height if CSS attribute `resize: none` can remove the resize feature – [Raptor](#) Apr 5 '16 at 3:44

To disable resize for all textarea

0

```
textarea {  
    resize: none;  
}
```

To disable resize for a specific textarea Add an attribute `name` or an `id` and set it to something. In this case, it is named `noresize`

```
<textarea name='noresize' id='noresize'> </textarea>
```

CSS

```
/* using the attribute name */  
textarea[name=noresize]{  
    resize: none;  
}  
/* or using the id */  
  
#noresize{  
    resize: none;  
}
```

I have created a small demo to show how resize properties work. I hope it will help you and others as well.

0

```
.resizeable {  
    resize: both;  
}  
  
.noResizeable {  
    resize: none;  
}  
  
.resizeable_V {  
    resize: vertical;  
}  
  
.resizeable_H {  
    resize: horizontal;  
}
```

```
<textarea class="resizeable" rows="5" cols="20" name="resizeable" title="This is  
Resizable.">
```

This is Resizable. Lorem ipsum, or lipsum as it is sometimes known, is dummy text used in laying out print, graphic or web designs. The passage is attributed to an unknown typesetter in the 15th century who is thought to have scrambled parts of Cicero's De Finibus Bonorum et Malorum for use in a type specimen book.

```
</textarea>
```

Use `resize` css property.

0

```
textarea {  
  resize:none;  
}
```

It will disable the resizable property of all textarea.

**To Disable specific textarea use below instructions**

To disable the resizable property of a textarea with id `textarea1` use this code

By using our site, you acknowledge that you have read and understand our [Cookie Policy](#), [Privacy Policy](#), and our [Terms of Service](#).

```
#textarea1 {  
  resize:none;  
}
```

To disable the resizable property of a `textarea` with name `textareaname1` use this code

```
textarea[name="textareaname1"] {  
  resize:none;  
}
```
